

Qatar Cool launches new website and Online Bill Payment Service

Qatar District Cooling Company also known as Qatar Cool, a major district cooling company in the region, has launched its new website and online bill payment service. The website has been designed to best reflect Qatar Cool's public profile, providing information on district cooling and the company as well as offering customers a secure, easy and efficient way to gain greater flexibility over the payment of their bills.

With improved functionality, design, and navigation the new website offers enhanced homepage design, and cleaner layout of page content. One of its major features is the introduction of an online bill payment service.

Mr. Ahmad Shehadeh, Chief Financial Officer (Acting CEO) of Qatar Cool commented, "Our team has been working on the new site for some time now - gathering input from our employees and customers. We're delighted with the results and especially pleased to offer our customers online bill payment. We serve many different kinds of customers and understand that while some like to visit our offices others would prefer to meet their requirements of us online. We want to do the best job we can to serve all needs and believe our new website and online payment service deliver on this."

The enhanced proposition is a testament of Qatar Cool's relentless pursuit in providing convenience for customers. Recognized as the most efficient, cost effective and environmentally friendly solution to satisfy Qatar's growing cooling demands, Qatar Cool has been leading the focus on eco-friendly technologies in the region. As a result, the company's operations have been steadily growing over the past few years. Qatar Cool recently reached 100,000 tons of refrigeration signed contracts at The Pearl Qatar where it owns and operates 'The Integrated District Cooling Plant (IDCP)', which was inaugurated in 2010. IDCP is the world's largest district cooling plant with a capacity of 130,000 tons of refrigeration to cool the Island's 45,000 residents once fully occupied.

Experiencing a rapidly growing waiting list for its services, the company has been overwhelmed by the response from the developers, attracted by the numerous benefits of district cooling. The company's new website is intended to further profile its proposition and give online visitors a better experience with a more seamless view of its products and services.

"We understand that today's busy lifestyle requires that things are kept simple and streamlined. The new website and online payment service convey that message and offer a great deal of convenience to make customers lives easier" concluded Ahmad Shehadeh.
